

Aurigo's integrated solution helps RDS Project enhance performance and control costs

Customer Profile

RDS Project is a leading engineering and general contracting firm, offering build solutions for a broad range of construction and engineering projects. RDS is promoted by professional builders with over 45 years of experience in infrastructure and construction. The company has extensive experience in the building of bridges, airport infrastructure, roads, marine structures and hydro projects

Business Situation

RDS dependence on spreadsheets and legacy systems was causing the company to leak money at the seams. They needed to find a solution that would offer a 360 degree solution to construction as well as enterprise resource planning processes.

Business Results

Reduced operational costs by **25%**

Increased information access retrieval by **70%**

CHALLENGE

RDS Project manages an array of projects spanning distributed locations. With offices and job sites spread around the country and beyond, managing contract and financial information was becoming a nightmare. Inefficiencies, poor collaboration and delayed communication were just some of the factors eroding profit. Obsolete spreadsheet based systems and legacy software applications were just not able to serve RDS Project complex work processes. The company needed a robust yet flexible solution that offered users the advantage of a construction management solution integrated with a complete ERP suite. The integrated solution needed to provide RDS management with timely and accurate information on which to base both strategic and tactical decisions.

SOLUTION

RDS assessed the different offerings available from top class vendors. options, which Aurigo CPMS and Microsoft Dynamics™ AX The solution offered immediate benefits that their older legacy systems did not provide, while offering the familiar Microsoft environment with open standards and a lower Total Cost of Ownership.

BENEFITS

The Aurigo Solution helped RDS see results consistently across the enterprise aligning strategic goals with the activities and processes that deliver value within the organization. Project management processes have been standardized, which increased efficiency and allowed staff to effectively manage multiple projects across multiple sites with multiple customers. The company was able to integrate construction project management, receiving, billing, and a host of other operations, allowing them to lower the cost of construction processes, reduce project delays, and manage complex job sites while significantly improving their customer service.

Business Situation

RDS dependence on spreadsheets and legacy systems was causing the company to leak money at the seams. They needed to find a solution that would offer a 360 degree solution to construction as well as enterprise resource planning processes.

“Our operations being project centric and geographically widespread, lack of complete project information and standardization of systems & controls were inhibiting our growth forward. We evaluated several stand-alone applications, however, Aurigo CPMS and Microsoft Dynamics™ AX integrated offering, delivered a rare combination that offered an ERP with a construction management system that delivered in-depth workflows which matched and mirrored our processes exactly.”

Mayank Goyal,
Director
RDS Project Ltd.
