

Build a better tomorrow

Aurigo builds software that helps build the world. We connect planning, construction, and maintenance in one AI-native system, helping capital owners plan with confidence, build with quality, and make better decisions across the capital life cycle.

For more than two decades, we have worked alongside government agencies and commercial organizations managing complex capital programs. That experience continues to shape how our software supports planning, delivery, and long-term asset performance.

Factsheet

For facility owners managing
fast-moving capital projects
across data centers,
manufacturing, life sciences,
and energy and utilities.

AURIGO
LUMINA

Aurigo's intelligence engine, built on 20+ years
of capital program data and domain expertise.
Our copilots and agents run on Lumina.

Built for efficient capital program management

PLAN

Connect capital planning, federal aid management, and community engagement in one AI-native platform, so agencies can build programs that are strategically aligned, funding-ready, and publicly supported.

BUILD

Coordinate work through governed workflows, maintain complete records, and see where cost, schedule, quality, or compliance issues require action, without losing project control inside a single system of intelligence.

MAINTAIN

Manage real property, asset condition assessments, maintenance activities, permitting, & operational records in one platform to assess asset health, prioritize maintenance based on objective data, & preserve records across each asset's life.

Industries we serve

Helping customers across North America

The Aurigo suite of products empower you to reduce costs, plan with confidence, and maximize your impact with modern AI-native platform that's easy to configure and use.
