Contractors and owners can now work seamlessly with Masterworks connector to PlanGrid

Aurigo and Autodesk have partnered to provide the most comprehensive set of cloud-based solutions for public and private owners and their contractors.

Aurigo and Autodesk have partnered to bring best-in-class capital planning, design, and construction products together for public and private agency owners and their contractors. Capital project owners at DOTs, cities, counties, and agencies across North America can now get an end-to-end digital construction lifecycle solution that includes a seamless integration between Aurigo Masterworks Cloud and PlanGrid, part of the Autodesk Construction Cloud suite of products and very popular with contractors.

When an agency uses Masterworks connector to PlanGrid, it makes life easier for both the project owners and all the contractors working on the job. Contractors can use the PlanGrid mobile application to get up-to-date information about owner projects and eliminate double entry by submitting information only once from their PlanGrid account. Capital project owners benefit from getting real-time RFIs, issues and documents uploaded from contractors working on the job site.

FOR OWNERS

Get better data and reduce project risks with connected contractors

- Give your GCs and subs simple yet powerful mobile software they will love to use

- Help your construction teams be more productive and ensure everyone's always on the current set

- Collect accurate data from construction sites as they're being built

FOR CONTRACTORS

Go paperless with electronic forms and documents

- Real-time access to the owner's project information

- An easy way to collect data electronically and submit mobile *RFIs, issues and documents*

- Save the time and effort of duplicate entry

*The biggest benefit we've had using Aurigo is our ability to **minimize manual data entry and increase accuracy.***"

We connect everyone working on your capital projects

Together Autodesk and Aurigo bring everyone involved in your capital and maintenance projects into one seamlessly connected construction planning, design and building experience. From initial planning and designs through the full construction lifecycle plus real-time integration with your contractors—everyone has the most up-to-date information at their fingertips.
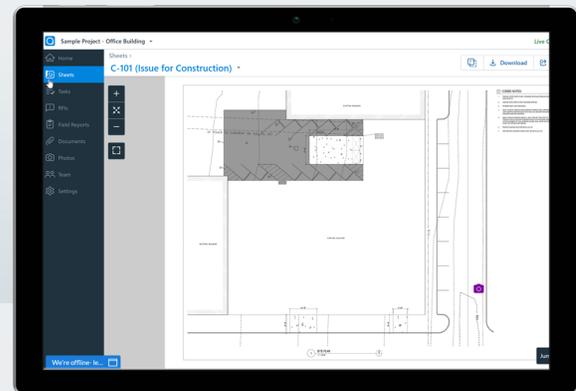

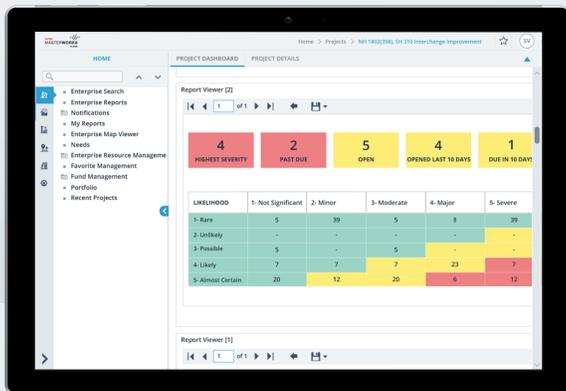

For Capital Planners & Programmers

- Get best-in-class capital planning capabilities, including project funding, programming, and multi-year cash flow analysis
- Manage all aspects of project financials and easily monitor project health

For Designers & Engineers

- Review designs and track approval history inside Aurigo Masterworks Cloud
- Let your entire team access and view designs inside Aurigo Masterworks Cloud

For Construction Project Managers

- Execute construction projects more effectively with thorough engineer's estimates and detailed schedules
- Track and manage all contracts, resources, RFIs, issues, submittals, meeting minutes and approvals in one place

For Contractors

- Ensure you always have the latest plans, documents, photos and designs when you're in the field
- Eliminate double entry with a direct integration between PlanGrid and the owner's Aurigo Masterworks Cloud
